Dear Customer,

The General maximum length for a typical roof overhang is 6" (Excludes Vertical Roof). Roof overhangs can be modified to extend farther than 6", but beyond this length, they begin to lose structural integrity on the roof, and the extended overhang may collapse and/or cause damages to the rest of the structure, and your personal items.

By signing below you are choosing to go against the recommendations of Dreams Carports and their Certified Engineer.

The undersigned understand without these supports in place the company (Dreams Carports I, Inc.) will not assume nor accept any liability that relates to structural failure of building due to extended overhangs.

Upon signing, buyer understands and accepts any potential liability, and forfeits all rights to bring a suit against Dreams Carports I, Inc. For any reason regarding such.

Thank you,
