LAND/CEMENT MUST BE LEVEL

- Cement should be 1 ft. shorter than roof length.
- Cement must be level and square from corner to corner.
- Return trip fees will apply if building is not installed.

In order to get the highest quality installation, we ask to have the site prepared and ready to go on the day of installation. Remove any electrical wires less than 15 feet above the intended height of the structure and verify that no underground utilities will be impacted by the installation process of your new building.

Our installers will use a minimum of 3' rebar anchors for ground installation or concrete anchors over a concrete slab. The use of double helix auger anchors, also commonly referred to as mobile home anchors, may be used for an additional charge or standard with a certified carport, garage, or barn. Remember, all of our structures come with free installation and free delivery.
